

Theory of Computation

Exercise 3: (Nondeterministic Finite Automata - NFA)

1. Construct the minimal-state NFA that accepts the language $\{ab, abc\}^*$

2. Convert the following NFA to DFA

NFA

	0	1
q_0	q_1	$\emptyset$
q_1	q_2	q_1, q_2, q_f
q_2	q_2	q_f
q_f	$\emptyset$	$\emptyset$

*3. What are the languages accepted by the following NFA ?

a)

$L = \{a, ab\}$

b)

$L = \{\}$

c)
